ABSTRACT

This report compares new cadets at USMA in the Class of 1983 with entering freshmen at institutions in the following norm groups: all four-year colleges, highly selective public four-year colleges, and very highly selective four-year private colleges. Data are presented on secondary school and socioeconomic backgrounds, values, interests, and activity patterns, and are based on the American Council on Education's yearly survey.

NOTE: Any conclusions in this report are not to be construed as official U. S. Military Academy or Department of the Army positions unless so designated by other authorized documents.

## EXECUTIVE SUMMARY

I. PURPOSE. This report contains information, for rapid reference, on the U.S. Military Academy Class of 1983 and on four norm groups of freshmen at other colleges.

II. METHODOLOGY. The United States Military Academy participates in the Cooperative Institutional Research Program (CIRP) of the American Council on Education (ACE) and the University of California at Los Angeles. On 2 July 1979, the Military Academy Class of 1983 entered West Point; and on the second or third day of Cadet Basic Training, 99% of this class completed the ACE survey on secondary school and socioeconomic backgrounds, values, interests, and activity patterns. The results of all colleges participating in the survey are compiled at UCLA. This report compares new cadets at USMA in the Class of 1983 with entering freshmen in the following norm groups: all four-year colleges, highly selective public four-year colleges, and very highly selective four-year private colleges. The responses to all questions in the survey are given in Tables 1-31 of the report, but a summary impression of the new cadet is given below.

III. RESULTS: A Summary Impression of the New Cadet.

A. The typical new cadets in the Class of 1983 are 18 years old, and graduated from high school in June just before coming to West Point; they had fathers who were college graduates and mothers who had some additional schooling after graduating from high school. The most probable occupations of their fathers were businessman (27%), or military careerist (14%). Their mothers were typically full-time homemakers (38%), or in clerical positions (12%). The median parental income last year was over \$24,000.

B. The new cadets had an average grade of "A-" in secondary school; took a college preparatory course; and were in the top fifth in Academic Rank in high school (88%).

C. The typical new cadet applied to and was accepted by two other colleges, and planned to earn at least a master's degree. Reasons very important for selecting the United States Military Academy were the good academic reputation (90%), the special educational programs (56%), and the financial assistance (48%).

D. The 1979 survey found that cadets continue to view energy and the environment as major national issues. More than four of every five new cadets (84%) think the government should do more to discourage energy consumption, that the energy shortage could cause a depression (94%), and seventy-three percent (73%) agree that the federal government is not doing enough to control environmental pollution. The new cadets also feel there are too many rights for criminals (76%); grading in high school is too easy (69%); parents should be discouraged from having large families (54%); women should get job equality (94%); wealthy should pay more taxes (73%); and colleges should use the same degree standards for all (87%).

E. Cadet self-identification showed some movement to the right from the 1978 to the 1979 survey, with the number of liberals remaining approximately the same, while the number of conservatives increased from 35% to 38%.

F. As long-run objectives, the new cadet hopes to be an authority in a chosen field (84%), raise a family (70%), help others in difficulty (63%), develop a philosophy of life (62%), and keep up with political affairs (71%).

## I. INTRODUCTION

The United States Military Academy participates in the Cooperative Institutional Research Program (CIRP) of the American Council on Education (ACE) and the University of California at Los Angeles. Since it began in 1966, the CIRP has provided data which make it possible to compare new cadets at USMA with students entering a wide variety of colleges. It has been the only systematic source of data available to USMA for making such objective comparisons. Each year the Office of the Director of Institutional Research has published a report describing the characteristics of the new cadets in comparison to students at other colleges which participate in the survey (see Houston, 1979,<sup>1</sup> for the most recent report). Over the last thirteen years, there have been changes in the kinds of men students who have entered West Point. In some characteristics, West Point's entering class has changed because society is changing; in other attributes, West Point's entering class has not changed to the same degree as students entering other colleges.<sup>2</sup> The current report continues ODIR's practice of publishing results of the ACE survey, and presents data obtained from members of the Class of 1983.

## II. METHOD

A. On 2 July 1979, 1,268 men and 130 women entered West Point as the Class of 1983. Of this entering group, 1,370 completed the ACE survey during the second or third day of Cadet Basic Training. Of the group that was tested, 288 reported prior college experience. Since the national norms published by the American Council on Education<sup>3</sup> deal exclusively with first-time, full-time freshmen, this report presents the opinions and characteristics of 981 male and 101 female cadets without prior college experience.

B. The ACE annual national norms survey collects data on secondary school and socioeconomic backgrounds, values, interests, and activity patterns.<sup>4</sup> The comparison of West Point cadets and norms for various types of undergraduate institutions that is made in this report highlights the unique aspects of the U.S. Military Academy student body, and similarities and differences between West Point and other groups of schools.

C. Since the Federal Service Academies have a unique role in higher education, there are no exactly parallel reference groups available for comparison purposes. However, four reference groups of freshmen with certain similarities are used in this report: (1) all four-year colleges (male freshmen), (2) all four-year colleges (female freshmen), (3) four-year public colleges with high selectivity (all freshmen), and (4) four-year private nonsectarian colleges with very high selectivity (all freshmen). The four-year colleges are those institutions which primarily grant a bachelor's degree only. Ninety-four thousand participants from both sexes from 241 four-year colleges were used. The four-year public colleges with high selectivity are those institutions with mean SAT-Verbal plus SAT-Math scores of 1,025 or more. The five service academies, as well as three other colleges, are included in this norm group. The four-year private nonsectarian colleges

with very high selectivity are those institutions with mean SAT-Verbal plus SAT-Math scores of 1,175 or more. All freshmen of both sexes are included in the last two groups.<sup>5</sup>

D. All of the questions in the original ACE 1979 Student Information Form, which were reported to participating institutions on the Data Summary printout, are included in this report with the following exceptions: (1) residence planned during fall term; (2) highest degree planned here; (3) marital status; (4) concern about financing college; (5) sources of financial support; and (6) living with parents last year.

### III. RESULTS

A. General. The results are presented in Tables 1 through 31. As an aid in interpreting the data, the items in Tables 15, 25, 26, 28, 29, and 30 have been rearranged in descending order of frequency of selection by male cadets. Results of selected items are described below under the headings of "Institutional Effects" and "Differences by Sex." Institutional Effects are the special characteristics of cadets at the Military Academy when compared to students at the institutions of the norm groups.

#### B. Institutional Effects.

1. More cadets (43%) list their current religious preference as Roman Catholic, compared to all four-year college students (34%) or private colleges of very high selectivity (29%) (Table 3a). Due to the requirement for candidates to obtain a nomination, cadets come from a wider geographical distribution than do students at other four-year colleges (Table 9). Seventy-four percent of the fathers of cadets had some education beyond high school, while only 56% of students in all four-year colleges and 61% of students in the public college norm group had fathers with this education. Eighty-seven percent of students in colleges with very high selectivity had fathers with this level (Table 10a). Fifty-nine percent of the mothers of cadets had some education beyond high school, while 48% of the mothers of all four-year college students and 81% of the mothers of students in private colleges with very high selectivity had this education (Table 10b).

2. The median parental income of cadets in the Class of 1983 was significantly higher than the parental income of students in all four-year colleges but lower than parental income of the private college students (Table 13a). Sixty-three percent of the cadets received an average grade of "A-" or above in secondary school. Of the norm groups shown in this report, the percentages receiving "A-" or above were: all four-year college students--22%, students of four-year public colleges of high selectivity--44%, and students at four-year private colleges of very high selectivity--60% (Table 16). Cadets applied to more colleges and were accepted by more colleges than were students in all four-year colleges, but students at the very highly selective four-year private colleges applied to and were accepted by more colleges than cadets (Tables 23 and 24).

3. In noting reasons that were very important in selecting "this college," 90% of the cadets in the Class of 1983 gave as a reason: "College has a good academic reputation." Of the norm groups, 55% of students at all four-year colleges, 71% of students at public colleges of high selectivity, and 87% of students at private colleges of very high selectivity gave this reason (Table 26). Cadets have a more conservative political preference than students in any of the norm groups (Table 27).

#### C. Differences by Sex.

1. Some differences between USMA male and female cadets are of interest. More women cadets had average secondary school grades of A- or above (76%) than did men (61%) (Table 16).

---

<sup>5</sup> A list of colleges incorporated in the last two norm groups is given in Appendix B.

2. In regard to reasons very important in deciding to go to college, USMA women listed six significantly more often than male cadets: learn more about things, prepare for graduate school, meet new and interesting people, become a more cultured person, gain general education, and improve reading and study skills (Table 25).

3. Regarding freshmen views (Table 28) on the statement "Women's activities are best confined to the home," the percent of male cadets agreeing with this (35%) was the same as men in all four-year colleges, while only 8% of female cadets agreed, compared to 21% of the women at four-year colleges.

4. On college expectations (Table 29), more male cadets than female cadets thought they "would marry within a year after college," while students in the norm groups had the opposite pattern. "Being very well-off financially" was listed as essential or very important by 67% of the men and 54% of the women at all four-year colleges but by only 57% of the men and 52% of the women at the Military Academy.

5. In order to highlight differences in all tables of the report, an "a" indicates over a 10-point difference when USMA males are compared to all four-year college males, or when USMA females are compared to all four-year college females. This report has made no systematic attempt to explain the differences noted.

## 1979 STUDENT INFORMATION FORM

## DIRECTIONS

Your responses will be read by an optical mark reader. Your careful observance of these few simple rules will be most appreciated.

- Use only black lead pencil (No. 2 or less).
- Make heavy black marks that fill the circle.
- Erase cleanly any answer you wish to change.
- Make no stray markings of any kind.

## EXAMPLE:

Will marks made with ballpoint or fountain pen be properly read? Yes ☐ No ☒

Dear Student:

The information in this form is being collected as part of a continuing study of higher education conducted jointly by the American Council on Education and the University of California at Los Angeles. Your voluntary participation in this research is being solicited in order to achieve a better understanding of how students are affected by their college experiences. Detailed information on the goals and design of this research program is furnished in research reports available from the Laboratory for Research on Higher Education at UCLA. Identifying information has been requested in order to make subsequent mail follow-up studies possible. Your response will be held in the strictest professional confidence.

Sincerely,

*Alexander W. Astin*

The Laboratory for Research on Higher Education at UCLA actively encourages the colleges that participate in this survey to conduct local studies of their student bodies. If these studies involve collecting follow-up data, it is necessary for the institution to know the students' ID numbers so that follow-up data can be linked with the data from this survey. If your college asks for a tape copy of the data and signs an agreement to use it only for research purposes, do we have your permission to include your ID number in such a tape? Yes ☐ No ☐

| This report compares new cadets at USMA in the Class of 1983 with entering freshmen at institutions in the following norm groups: all four-year colleges, highly selective public four-year colleges, and very highly selective four-year private colleges. Data are presented on secondary school and socioeconomic backgrounds, values, interests, and activity patterns, and are based on the American Council on Education's yearly survey. |   |   |
